

Example of filled website contact formula

The following is an example of an inquiry that provides sufficient and relevant information for Lind Foundation to initiate dialogue. The applicant and organisation do not exist in real life.

Data field	Answer
Name	[Name]
Email address	[Insert email address]
Project Make sure you answer: — Is the social change clearly scoped?	[Project] is a nonprofit organization based in Denmark that is dedicated to supporting socially disadvantaged individuals who are not in education, employment, or training (NEET) by helping them enter the job market. [Project] focuses on providing comprehensive assistance and resources to bridge the gap between individuals facing social disadvantages and meaningful employment opportunities in the Danish labour market.
Website	[Insert link to organisation website]
Focus area (Primary focus)	Employment
Change target Make sure you answer: — Is the intervention targeting disadvantaged people?	[Project] targets young people Not in Employment, Education, or Training (NEET) with a special focus on people ready for the job market. Specifically, our main target group is people between the age of 15-29 years that have been unemployed for at least 12 months and experience personal challenges such as abuse, crime, homelessness, or mental health issues.
Year of establishment	2008
Data	We have a structured process for surveys and interviews providing both qualitative and quantitative data on our participants of the project before, under, and after having participated in the project. Further, various metrics are

Make sure you answer:

- Is the intervention documentable?
- Is the data sufficient to do a SROI analysis?
- Do you have access to baseline and endline data?

employed to measure programme outcomes, such as employment rates, job retention rates, income levels, and skill development before the programme, after completing the programme and 12 months after completing the programme.

Proven impact

Make sure you answer:

- Will the social change create lasting changes?
- Does the intervention facilitate improved living conditions over one-off effects?
- Can you access post-intervention data on the target group?

After having provided the programme for 15 years, we have data on the effects on more than 900 participants. 70% of participants find employment within six months, and 60% of those individuals maintain their employment for at least one year or more compared to 40% and 30% for the control group based on ordinary employment efforts in Denmark.

Further, post-intervention data analysis shows that participants experience tangible improvements in their living conditions such as improved well-being and confidence. On average, the participants have experienced a 30% increase in average income compared to their pre-intervention income, leading to greater financial stability and improved access to housing, healthcare, and other essential needs.
